Skills

My skills include video production, photography, web development, curriculum development, HTML programming, Javascript programming, proficiency in Microsoft Office products, Articulate E-learning software, basic knowledge of SolidWorks, digital content creation, and a proficient researcher.

My best skill is to be able to look at things and see how they are a part of the bigger picture. When I create something, I ask myself, "How will this affect other people and how will they respond to seeing or using what I create?" I think this is an important skill to have because I then create all my work with a purpose and with meaning so that it will be relevant and beneficial to those that use my work.

Experience

Machining Solutions

2012-Present

- Created and maintain a sophisticated website.
- Developed curriculum and online E-learning programs for CNC manufacturing training
- Created an online training routine and broadcasting solution to provide a virtual classroom environment for the instructor
- Create marketing materials using original images and video produced by myself

Amateur Photographer / Videographer

2012-Present

- Able to shoot in full manual on most any DSLR, can choose correct lenses for specific composition, can adjust for a multitude of different lighting and composition scenarios
- Complete knowledge of Adobe Lightroom and how to use the tools provided by Lightroom for post-processing and editing
- Ability to use manual filming techniques, such as panning, rack focuses, dolly shots, etc. to create dynamic video pieces
- Highly skilled in Final Cut Pro X to be able to edit and post process videos to create a polished final piece

Education

University of Rochester

2012-2016

Dual Major student with a bachelor's degree in both Political Science and Digital Media Studies

I learned much of my fundamental photography and videography skills while pursuing a degree in Digital Media Studies, such as composition, shooting techniques, editing skills and theoretical knowledge. I also learned HTML and Javascript so that I can create functional websites to display collections of my photographs and videos without having to rely on templates or a web developer. One of the most important skills I learned through this course of study was how to think about the bigger picture and how the digital content we create can have an impact on the lives of others and that is what my work strives to do.
